DO & DE Classes Help Student

Distributive Education and Diversified Occupations are work-study programs and are an investment in American youth and an investment in business and industry, for the young people who primarily benefit will soon enter some form of employment as full-time adult workers. Experience has proved that many students would have left school at the first opportunity, have remained in school when they have a job supplemented by practical, interesting in-school training courses related to the job. Through the program they have found a challenge and a goal.

Industrialists and businessmen who have been cooperating in the operation of these programs have made a contribution to the social and economic well-being of Appomattox and the nation which can scarcely be measured. By "working together," they have made it possible for other communities to follow a similar program.

A work study course is a cooperative activity conducted by employers and a school. The employer provides a planned work experience for a trade or Distributive occupation through actual employment. The school provides instruction related to the youths' work experience and additional instruction needed for their general education.

The employers major responsibility in any work-study program is to employ one or more students who are or will be enrolled in the course. He must recognize the fact that he is participating in a community endeavor to prepare young people for occupational life and adult citizenship.

In return for his participation in the program, the employer will derive certain benefits.

1. Potential full time employees who will be trained under his own supervision and in accordance with his own methods and practices.

2. An opportunity is available for early discovery of suitable personnel, who, after training and experience and acquaintance with the organization will be valuable potential candidates for the supervisory and managerial positions.

3. Through instruction provided by the school, desirable personality traits will be developed.

4. A more thorough training program is provided than the employer could give without the cooperation of the school, for in addition to the in-school training, the school contributes supervision and coordination in developing satisfactory full-time workers and responsible, well-informed citizens.

5. Trainees are likely to remain with the organization upon completion of their course, to the benefit of both the trainee and employer, if the opportunity exists.

6. Young people who might otherwise leave the community and seek employment elsewhere are encouraged to remain and build their careers at home.

7. Finally, an employer is helping to develop men and women who will not only have specific skills and technical know-how related to these skills, but who will also have an understanding and appreciation of our American competitive system of business and industry based upon their participation in that economic system during their formative, learning years.

We are proud to offer the services of such a program to the businessmen of Appomattox County, who in cooperation with the school system can train better employees and citizens to the benefit of every buying citizen of this locality. Any questions about this program or its functions may be directed to Mr. Charles Wilson, Distributive Education and Diversified Occupations Coordinator of Appomattox High School.

In FASHION Now

The extreme silhouettes, which are often not too becoming to adults, look wonderful on children. The chemise helps to hide a pot tummy, something all little girls have in common. On mother, it often hides a slim waist and only serves to call attention to her hips—which may be a little large.

The trapeze is made to order for young children. In fact, they have been wearing something very similar to this for many years.

Panties to snatch are coming back. The only wonder is that they ever went out of children's fashions.

Youngsters take clothes seriously. Any bright first or second grader can tell you exactly the kind of dress she wants for schools or some social event.

Suits for the young set have been popular for the past couple of years. And it seems a suit has become important an item with little girls as with big girls.

Costume jewelry designers tell us that the sale of children's trinkets is higher than ever before. Good jewelry that grows with the child is another popular item.

In the past a string of pearls to grow was about the only type of this jewelry available. Now we have gold beads and even diamond jewelry in this class.

OPEN SEASON SET FOR RAILS, GALLINULES, DOVES AND WOODCOCK

Virginia's dove hunters we'll have 65 half-days of shooting this fall and winter, five more than they were given in 1957, according to Chester F. Phelps, executive director of the Virginia Commission of Game and Inland Fisheries. This longer season will be split into two parts, running from September 15 to November 10 and then from December 27 to January 3, he said. He added that the bag limit on doves will be 10 a day and the possession limit 20 after the first day of the season.

Rails and gallinules will be the first group of migratory waterfowl to be harvested by Old Dominion hunters this fall, however, Phelps stated. The open season on rails, including sora, and gallinules will be from September 13 to October 31, he explained. Bag limit on all rails except the sora and on gallinules will be 15 daily and 30 in possession, while the bag limit on sora will be 25 daily and 25 in possession, the director said.

Open season on woodcock will run from November 17 to December 26 in Virginia this year, continued Phelps, and hunters again will be allowed to take four woodcock a day and have eight in possession.

The dove season of 65 "half-days" means that dove shooting will be allowed from 12 o'clock noon until sunset on those days, Phelps concluded.

Colored Dots

An overflow crowd attended the annual home-coming and revival at the Springfield Baptist Church last Sunday. The morning sermon was preached by the pastor, the Rev. J. P. Rose and the afternoon sermon by the Rev. James Franklin, student of Virginia Seminary. Music was furnished by the St. Joy Church Choir. Dinner was served by the ladies of the church. The Rev. Everette, of Baltimore preached the 7:30 sermon and is the guest minister for the week. A total offering of $417.79 was reported during the day.

The annual home coming and revival will begin at the Promise Land Baptist Church this Sunday at the 11:30 service. The pastor of the church will preach at the morning service and music will be furnished by the home choir. The 3 P. M. service will be conducted by the Oak Grove Baptist Church of Buckingham County. The Rev. L. S. Ward and his choir will render special service. Dinner will be served by the ladies of the church.

A large crowd attended the annual revival and home coming at the Chestnut Grove Baptist Church last Sunday morning. The pastor, Rev. N. R. Jordan preached in the morning, and the Rev. E. Q. Lawing delivered the 3 P. M. sermon. The Rev. James Franklin is conducting the week of service. Dinner was served by the ladies of the church.

The Rev. C. A. Marshall reported a successful revival at the St. Joy Baptist Church last week. Ten additions were made to the church. The Rev. Louis Jones, of West Virginia was the guest minister. The total offering for the week was $537.05.

Impressive services were held at the Hat Creek Baptist Church last Sunday by the Rev. C. A. Marshall.

The annual revival will begin at the First Baptist Church this Sunday morning.

Rev. C. A. Marshall is conducting revival at his home church in Burkeville, Va. this week.

Plans have been completed for the celebration of the 70th anniversary of the Morning Star Baptist Church and the 12th of its pastor, Rev. S. E. Singleton, on the second Sunday in September at 11:30 and at 3 P. M. Rev. C. L. Brown will deliver the anniversary sermon of the pastor and the pastor will preach the anniversary sermon of the church.

DEATHS

E. E. WARRINER

Ernest Edlon Warriner, 67, of Evergreen, died suddenly Sunday night at his home.

He was born in Amherst County, Oct. 1, 1967, a son of William Edward and Sallie Warriner, both of whom preceded him in death.

He was a farmer and a sawmill in this county.

Surviving in addition to his wife are three sisters, Mrs. Lula Smith and Mrs. Daisy Hall, both of Alexandria; and Mrs. Ella Gibson, of Washington; and a brother, R. W. Warriner, of Evergreen, and a number of nieces and nephews.

A funeral service will be held Thursday at 3 P. M. at the Baptist Church. Burial will be in Evergreen Cemetery.

CUT OAT SILAGE EARLY FOR BEST RESULTS

When shall I cut oat silage for best yield, and what stage should I use?

This is an oft-asked question in Virginia dairy circles, says Griffith, dairy specialist, and he cites some research that may help answer it.

Tests at Georgia Agricultural Experiment Station showed the greatest preservation of protein and feed value was obtained at the pre-bloom stage of oats, Griffith says. The use of the milk of ground anap corn for silage was markedly more successful as a preservative than was metabisulfite.

Ten different silos were used to compare stages of maturity and preservation for oat silage. The maturity had little influence on production as long as the crop was cut before the milk stage. Oat production was satisfactory when silages preserved with ground corn; but when preserved with sodium metabisulfite, only half as much silage was produced per acre. Dairy milk production.

The 10 cows in the test produced one pound of grain for every three pounds of milk produced during the trial feeding periods that lasted 28 days. There was no significant difference because of the relative in pounds of silage consumed; however, because of the higher percentage of dry matter in the silage preserved with ground corn, cows actually ate four pounds more dry matter per day with this silage.

Griffith says there is a natural tendency to wait too long before starting to cut all forage, and Virginia dairymen should guard against this.

LATEST FASHION NEWS

Italian designers want to put women up to their ears and up to their eyes, in some cases, in fuzzy colors this fall. They have also moved their waist up to their bosoms.

Most of the important imported collections shown recently emphasized the mounting neckline and elevated waist.

A good many of the popular sports coats feature convertible hoods which can be buttoned up to the eyes.

Most of the dresses have the foreshortened, nursery school waists. The knits of soapsud yarns are popular even in the most expensive collections.

The Bo-peep look is also applied to evening taffetas, some with cut-away over-skirts, longer behind. A few full length ballgowns are found in every collection to prove there are still occasions where the short evening gown is not quite elegant enough.

Another influence in the fall fashions is called the milkmaid look. This look shows several crossed collars and flanked skirts. Linen and muslin are favorite fabrics for these collars.

From Italy comes the "box" to take the place of the sack. In this design the torso is entirely in cigarette-package shapes of various fabrics. Some look like cases for mysterious musical instruments not nearly as shapely as the cello.

Skirts that flare just below the thigh give shape and dash to a great many Italian imports.

KNOW THE WEATHER

By E. H. Sims

What is meant when we speak of the air ocean? How far upward—and below the ground, does it extend?

The air ocean is that layer of gas which surrounds the earth and penetrates beneath the ground for a short distance. It is thought to be about 250 miles high though all living things dwell in the three miles of air above the earth's surface.

The necessary air for insects, moles and creatures which live underground extends down to about ten feet below the surface. Nothing will be found living below this depth.

Human beings begin to need oxygen at about 10,000 feet if they fly. Prolonged stay above 15,000 feet will usually prove fatal.

Homemakers Items

The price which the consumer pays for her bag of groceries is divided more in favor of the folks who packaged and delivered it than of the farmer who raised it.

That's the substance of a new study by the U. S. Department of Agriculture.

Most people buy a lot of services with their food. The expenses involved in moving food from the farm to the consumer averaged 60 cents of the food dollar in 1957, as compared with 47 cents in 1945. This expense, dubbed "marketing margin" by economists, has risen 27 billion dollars since 1940. Meanwhile, the farmer's share went up 14 billion dollars.

While the margin was about the same in 1940 as it is today, it narrowed greatly during the war. In the succeeding years, the fixed costs of the marketing margin have advanced more steadily than have the variable prices which farmers receive.

The biggest, single cause for the rise in food costs is the advance in the general price level. Wages and profits have kept pace with it, so it now is more expensive than formerly to move a carload of lettuce from California to New York. USDA economists point out that eating out more often; taxes, packaged, pre-cooked meals; and an ever-growing city population all help to widen the price spread between the farm and the table.
